DETAILED ACTION

1. The application filed March 2, 2004 is presented for examination and claims 1-12 are pending.

Allowable Subject Matter

2. Claims 1 to 12 are allowed.
3. The following is an examiner's statement of reasons for allowance: the claimed invention is directed to a signal processing of a liquid crystal driving circuit.

Independent claim 1 identifies a uniquely distinct feature "a detection circuit for determining whether or not the input digital data matches internal set data, and, when it is determined that the input digital data matches the set data, switching the first switch so that the supply analog voltage corresponding to the input digital data is output and switching the second switch so that the supply analog voltage is output".

Independent claim 8 identifies a uniquely distinct feature "determining whether the received digital data matches stored set data, and when the match occurs configuring the switch circuit such that the supply analog voltage matching the received analog voltage is output".

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kamiya et al. (Patent # 6,693,614).

The closest art, Kamiya et al. as discussed above, either singularly or in combination, fails to anticipate or render obvious the above limitations obvious.

4. Any comments considered necessary by applicant must be submitted no later
